

Installation

With a revolutionary design, this panel was created, the charm of this design is that it is used in any type of space and is very effective. The scientific combination of materials and special design, the absorption level and the calculated thickness of the cavities, have resulted in the panel absorption function being very efficient in the initial reflection treatment. This sample offers you the best performance in medium and high frequencies. This panel, which is usually suitable for special rooms such as recording or broadcasting studios, offers one of the best acoustic solutions on the market at a reasonable price. It also has a unique feature that when installed in series, the panel connections are hidden from view, allowing you to hide the cables.
