

Installation

Bass traps can be introduced as the best solution for improving and optimizing low frequencies and are an excellent complement to other acoustic products. extra bass of music is often gathering in the corners of the room. Problems that result from the frequency of the bass are one of the most important issues in acoustics that must be solved in any room or place. Many times we have realized that even the smallest equipment in the desired location, even moving a sofa changes the listener space and has a side effect. Therefore, the use of bass traps to complete the acoustics of the environment and control the bass is very important. This simple example of this bass trap is to reduce costs and create simplicity for classic tastes with the same efficiency as bass traps, absorbing and controlling problematic bass sources of low frequency frequencies. Available in 2 sizes and minor appearance changes.
