

Installation

Colored foams, especially white foams, oxidize and turn yellow over time or exposure to sunlight, but now a great solution is to ensure that the appearance and function of the panel is maintained at the same time. The panel has special colored wood surfaces that are not only durable, but also offer dual and simultaneous absorption and diffusion function and control the extra energy in a room without compromising its environment. Also the best performance in control It has medium and low frequencies and controls the extra energy in a room without compromising the useful frequencies of the environment. The special design of the panel by adding a wooden surface has helped make it more efficient. As you know, wood is known for its excellent acoustic properties, so it adds elegance, modernity and efficiency to the panel and makes it suitable for use in any place.
