

Installation

This is a very practical, useful and effective panel with special specifications. It consists of four units that have the ability to arrange a pattern, or a single unit according to your taste. The advantages are be combined absorption and dispersion cost-effectiveness and easy installation. Finally, it is a wonderful and versatile panel. It is suitable for any space to adjust, treat or improve sound waves. The difference between the Plus model and the simple one is in the final dimensions of the panel, which is made four small units and the thickness difference of the panel. It can be used in home theaters, recording studios, post-production studios, performance spaces rehearsal rooms, conference and teleconference rooms, public spaces, halls, etc., which require sound absorption and playback properties.
