

Installation

Extremely functional and effective two-dimensional panel high absorption and double propagation in vertical and horizontal surfaces for places with critical sound conditions which is composed entirely of calibrated acoustic monofoam. It runs at medium and high frequencies and it is remarkably clear. This panel has very effective absorption due to the complete composition of monofoam. Recommended to use at recording and broadcasting studios, post-production studios, conference and telephone conference rooms, lecture halls, distance learning rooms, public spaces, halls, performance spaces, etc.
