

Installation

Extremely functional two-dimensional panel with high efficiency and absorption and double propagation in vertical and horizontal surfaces for environments with critical sound conditions, which is composed entirely of calibrated acoustic monofoam. It runs at medium and high frequencies and transmits sound to it is remarkably clear and distinct. The difference between this sample and DC2 panel is in the dimensions of panel. this panel has a very effective absorption due to the complete composition of monofoam. Recommended using at recording and broadcasting studios post-production studios, conference and telephone conferencing rooms lecture halls, distance learning rooms public spaces, halls, performance spaces, etc.
