

Installation

This panel is known as the flagship of a set of acoustic panels that are able to treat acoustic problems without eliminating the main waves or excessive noise reduction. This panel is a combination of wood and acoustic monofoam with non-consecutive linear grooves capable of simultaneous The act of absorption and diffusion. The act of absorption and diffusion is created after much research that is effective in medium and high frequencies as well as solving echo problems.

Another feature of this model is that if installed in the corners, it acts as a bass trap in low frequency control, which you can see this model in the bass trap category. The beautiful design of this panel gives a special visual appearance to the place that can be adapted to a wide range of interiors, including control rooms, broadcast studios, live broadcast rooms where a wide range of instruments and sounds are recorded, rehearsal rooms and other performance spaces.
