

Installation

Deconik Archer Absorption acoustic panel series is an effective proposal for sound control in a large number of projects. Modern design with the highest efficiency is used in this panel. It has the ability to control reflection of sound, which improves the hearing performance of people. It is mainly used for medium and high frequencies. If the acoustic panel is installed with an air distance of several centimeters from the wall, it can be efficient in medium and low frequencies. Sound absorbing acoustic panel can be installed on any flat surface, for example ceiling and wall. This polyurethane foam acoustic panel (acoustic foam) with suitable density
