

Installation

This panel includes 2 units with dimensions of 60*30*7 cm with the same color as your choice. Deconik Archer Premium Absorption acoustic panel series in wooden frame and felt fabric covering with 11 colors is an effective proposal for sound control in a large number of projects. The modern design of this acoustic panel with the highest efficiency is used in this panel. It has the ability to control sound reflection, which improves the hearing performance of people. It is mainly used for medium and high frequencies. If the acoustic panel is installed with an air distance of several centimeters from the wall, it can be efficient in medium and low frequencies. The fabric cover of this panel causes the variety of colors of acoustic panels. The fabric texture of this product not only helps in absorbing additional frequencies but also helps in sound absorption.
