

## Installation

The two-dimensional diffuser panel is made entirely of wood, which is very popular, effective and efficient at medium frequencies. Often for spaces such as concert halls, Wi-Fi rooms and recording studios, where effective dissemination is often required. Without over-absorption at the same time, it is practical. Multifuser wood consists of two units that you can put together and form a square or install separately according to individual taste and desire. In addition to its attractive appearance, efficiency It is effective in a wide frequency range of settings. The effective propagation of this panel is in the range of 450 Hz to 10 kHz. It very effective in conference rooms, classrooms, theaters, Hi-Fi and home theater. This panel is available in two colors.
